# **Cryopreserved Product**

# Cord Blood CD3+ Pan T Cells

Catalog#	CB03010C
	CB03020C
	CB03025C

10 million cells 20 million cells 25 million cells

#### **Product Description**

Human Umbilical Cord Blood CD3+ Pan T Cells are negatively selected from umbilical cord blood mononuclear cells.

Whole umbilical cord blood is needle aspirated from the umbilical cord vein using a cord blood collection bag. This material is derived from a human source and may contain 35 mL of citrate phosphate dextrose (CPD). Mononuclear cells are enriched from cord blood using a density gradient centrifugation protocol. Cells expressing CD14, CD16, CD19, CD20, CD36, CD56, CD66b, CD123 and CD235a are depleted from the mononuclear cell suspension using immunomagnetic particles leaving purified, untouched CD3+ pan T cells.

Cells were obtained using Institutional Review Board (IRB) approved consent forms and protocols.

#### Cryopreservation

Cryopreserved products allow for prolonged storage before use. Cell products contain 10% DMSO to minimize cell death during freezing. All cryopreserved products are stored in containers designed and tested for ultra-low temperatures at long time intervals. We normally ship cryopreserved items on dry ice, but can also use a cryoshipper at the customer's request

#### Sample Collection and Processing

All samples are collected at nearby partner hospitals or clinics. Samples are then quickly processed in our on-site laboratory to achieve maximum viability and quality. Cryopreserved cells are frozen at -1°C/ minute in a -80°C freezer, and then transferred to liquid nitrogen.

Infectious disease testing for HIV, HBV, and HCV is performed on a sample of cord blood by a CLIA-certified lab.

#### Format

Isolated cells are normally frozen in CryoStor<sup>™</sup> CS10 (10% DMSO). We can also use freezing media as specified by the customer.

#### Storage

Cryopreserved cells should be maintained at -135°C or colder (in liquid nitrogen). The cells are warrantied for twelve months from the date of receipt if stored at -135°C or colder. Storage of cells at -80°C for less than one month should maintain cell viability but is not covered by the warranty.

### **Thawing Instructions for Cell Products**

Refer to our "How to thaw StemExpress primary cells for optimal viability?" under our Frequently Asked Questions at stemexpress.com/faqs/ to access our online Thawing Protocol.

## Warning

This product contains human tissue or other biological material and MUST be handled at Biosafety Level 2 or higher. All biological products should be treated as potentially infectious or contaminated material, even if infectious disease screening reports are negative. Follow universal precautions and wear appropriate personal protective equipment.

#### **Product Warranty**

For our product warranty, please review our Terms and Conditions at stemexpress.com/terms-and-conditions/.

FOR RESEARCH USE ONLY. NOT APPROVED FOR HUMAN OR VETERINARY USE IN VIVO.
